1.0 EXECUTIVE SUMMARY

1.1 PROJECT SUMMARY

Dominion Due Diligence Group (D3G) performed a Property Condition Assessment (PCA) of the Hill Top Terrace Apartments - Condominiums located at 1776 Liberty Lane, SE in Blacksburg, Virginia. Mr. Dale L. Baxter and Mr. Steve Kaskey performed the site inspection on August 23, 2005. The property consists of ninety-six (96) residential apartment units and one (1) central building (which includes maintenance and lease offices, as well as, community and laundry rooms) constructed in 1982. The eight (8) three-story residential buildings, one (1) central building, and one (1) swimming pool pump house contain approximately 91,590 gross square feet, an estimated 80,928 net rentable square feet, and are situated on 6.854-acres. Our inspection indicated that the site improvements are in generally fair to good physical condition. The site is serviced by electricity, natural gas, and municipally supplied water and sewer. Additional property improvements include approximately 74,792 square feet of aggregate asphalt surface for parking and driveways, and landscaped open areas.

Included in this PCA, we review the status of major building systems, review accessibility compliance, present a photographic record of the property and conclude with an estimate of required replacement reserves for immediate deficiencies and the following thirty (30) year period. Please note that this report was prepared to illustrate current property condition and to determine future Replacement Reserves with regards to condominium conversion. Therefore, our Reserve analysis does not include costs associated with interior unit component and equipment replacement, repair or maintenance.

The asset management staff appeared knowledgeable and conscientious relative to the coordination of tasks, the delivery of services, and the overall welfare and condition of the complex and its tenants. Mr. Casey Reynolds (Client Representative), Donna Murphy (Property Manager), and Michael Smith (Maintenance Technician) were cooperative and helpful during the inspection process.

1.2 IMMEDIATE DEFICIENCIES

An investigation of the subject property identified the following "Immediate Deficiencies" which will require repair during the next zero to six months (0-6 months).

WE WAS A STREET OF THE PROPERTY OF THE PROPERT	OFAC.
Install Ground Fault Circuit Interrupted (GFCI) outlets	\$ 4,012.50
Repair firewall access doors and seal attic penetration	\$ 5,200.00
Remove locks from apartment electrical disconnect boxes	\$ 800.00

United that the second of the second	GT/AT/IDE
Remove flammable liquids as noted	\$ 500.00
Reconfigure lease office parking lot to provide for handicapped access	\$ 280.00
Provide handicap access for lease office/club house building	\$ 2,500.00
Install levered hardware/reconfigure club house kitchen/bathroom as noted	\$ 1,500.00
Repair fire alarm system visual device unit H, second floor breezeway	\$ 500.00
install walkway and entrance stairway handraiis	\$ 8,000.00
install drain pans under 2nd/3rd floor apartment water heaters	\$ 2,880.00
Repaír GWB as noted	\$ 500.00
Repair moisture damage in apartments as noted	\$ 1,100.00
Prune trees north and west side of unit H	\$ 650.00
Repair damaged downspout northwest side of unit H	\$ 100.00
Repairs cracks in CMU foundation walls as noted	\$ 6,000.00
Change configuration of stairway riser as noted	\$ 800.00
TOTAL:	\$ 35,322.50

- The outlets in the kitchen counter area of all apartment units are not ground fault circuit interrupted (GFCI) protected. In addition, exterior outlets in the first floor breezeways of all units and on exterior walls of the lease office building are not GFCI protected. Immediate replacement or installation of GFCI circuit breaker protection of all non-protected outlets is required.
- Accessed attics (buildings C and D) were observed with access doors in the unit fire walls. These access doors appeared fire-rated, but without proper automatic closure hardware (spring-hinges). In addition, numerous television and internet cables passed through the access doors preventing them from properly closing. Fire walls were observed to have unsealed penetrations and seams as well as missing sections of GWB under the roof sheathing. The recommendation is made to repair and seal damaged fire walls, re-route and reseal communication cable penetrations, and install closure hardware on the access door assemblies to prevent possible spread of flames in the event of a fire. Also, further inspection of the remaining unit attic areas is deemed warranted based upon inspection findings.
- The electrical disconnect boxes for the apartment units located in the first floor breezeway panel have locks installed. The recommendation is made to remove locking devices from the disconnect boxes.
- During the inspection, improper storage of flammable liquids (plastic gasoline containers) was observed. The recommendation is made to remove flammable liquids from the maintenance office storage room and third floor breezeway landing of unit E and provide an approved flammable liquids storage cabinet to prevent potential of associated flashpoint hazards.

- The parking lot for the lease office building does not provide adequate handicapped access to the facility. The recommendation is made to provide proper handicapped access, to include vertical and horizontal signage, access aisles, and properly configured ramps or curb cuts.
- Inspection observations of the leasing office building indicate accessibility concerns which need to be addressed. The entrance door threshold to the leasing office is too high (.75"), the back entrance to the clubhouse is stepped (currently the only club house entrance), and the front walkways to the lease office, laundry room, and club house (permanently locked due to properly communications vendor requirements) appear to exceed slope ratio requirements (1:12) for accessibility. The recommendation is made to provide clear un-obstructed accesses to leasing office and club house entrance doors and to reevaluate front walkway slopes and adjust grading if necessary.
- The leasing office building features a club house which is included in the list of proposed renovations; however, no levered hardware on kitchen and bathroom sinks, no scald and abrasion protection on the bathroom sink, no grab bars were installed in the bathroom, and approaches to kitchen counters/sink were observed to be inadequate. Additionally, all entrance doors to the building (to include lease office, laundry room, and club house) will require levered hardware. The recommendation is made to include ADA compliance repairs in the proposed renovations.
- The fire alarm system audio visual device on the second floor breezeway landing
 of apartment unit H was observed to be damaged. The recommendation is to
 properly install/repair the audio visual device and have the system tested for
 proper operation.
- Each apartment unit features an entrance stairway. These stairways consist of cast-in-place concrete steps which contain no handrails. Additionally, walkways around apartment units F and H feature stairways of the same configuration. The recommendation is made to install proper handrails which are in compliance with International Building Code (IBC) standards (2003 IBC 1009-11).
- The apartment units feature forty (40) gallon electric water heaters. Overall, the
 condition of the equipment is acceptable; however, the absence of drain pans
 at second and third floor apartments was observed in all apartments. The
 installation of drain pans is advised to prevent possible water damage to interior
 structures caused by possible leaks.

- Although the proposed renovations list include the repair/texturing of all interior walls, inspection observations noted repairs/texturing of gypsum ceilings in the mechanical/storage closet of apartment B-16 and living room (bowed ceiling) of apartment G-73 are to be included in the proposed renovations.
- Evidence of moisture damage was observed in the bathroom linen closets of apartments D-27 and D-28; additionally, flooding of the mechanical/storage room floor of apartment D-27 was observed. The recommendation is made to further investigate sources of water infiltration and include repairs as part of proposed interior renovations. Areas of visible mold growth exceeding 10 sf per contiguous area warrant appropriate remediation by training contactors.
- The pruning of existing trees on the north and east sides of unit H is required to prevent possible damage to the building's envelope.
- Repairs to the vinyl siding are on the list of proposed renovations; however, the section of missing gutter downspout observed on the northwest corner of unit H should be included in these repairs to prevent undermining of foundation structures caused by storm-water runoff erosion.
- Buildings were observed with localized (minor) settlement cracking of the
 concrete masonry unit (CMU) foundation walls. Stair-step cracking, damaged
 mortar parchment, and settlement cracking were primarily located at grade, and
 are not indicative of greater structural issues. The recommendation is made to
 repair damaged CMU parging (re-pointing and tooling) to prevent future
 moisture infiltration and freeze-thaw damage.
- Repairs/replacement/coating of stairways and landings are on the proposed renovations list; however, the height of the top riser on the east entrance stairway to unit E was observed too short per BOCA/IBC standards. The recommendation is made that repair to this staircase is performed.

1.3 PROPOSED RENOVATIONS

The following is a listing of proposed/planned renovations at the subject property. The Replacement Reserve analysis has been completed based on the assumption that the listed rehabilitation items are completed per industry standards, prior to the sale of condominiums.

ENERGY OF THE STREET OF THE ST
Refurblsh exterior building entrance staircases
Repave/Re-stripe parking lot
Repair all damaged and settled concrete
Repair pool, new tile, new fence

PROPERTY CONDITION ASSESSMENT (PCA)
HILL TOP TERRACE
BLACKSBURG, VA
D3G PROJECT # 2005-653
PAGE 4

 THE STATE OF
 Construct dumpster enclosures
 instali new masonry entrance signs
 Perform landscaping improvements
 Renovate club house – weight equipment, fumiture, sales office, etc.
 Install additional exterior lighting and repair/replace existing
 Power-wash and Repair damaged vinyl siding
 Replace all interior light fixtures
 Interior unit renovations (finishes, carpentry, flooring, appliances, general repairs)
 Replace all door knobs and locksets
 Repair/replace HVAC components (both interior and exterior)
 Replace water heaters older than eight (8) years and those with problems
 Replace all plumbing fixtures
 Replace all stacked laundry units

- The concrete surfaces of stairways and landings has been evaluated by an
 engineer and will be repaired and replaced. During concrete replacement
 stairway railings will be stripped and repainted. The recommendation is made
 that during concrete repairs, replacement of damaged metal stringers be
 considered.
- The asphalt parking lot and drives are currently in poor physical condition and markings are severely faded, warranting complete overhaul.
- The property features an extensive amount of concrete flatwork damage, spall, and uplift, warranting repairs to rectify potential trip hazards. The lack of front entrance stoop and walkway hand and guardrails require installation.
- The in-ground pool with wading pool enclosed within a chain-link fence are in poor physical condition warranting complete overhaul.
- The three (3) dumpsters are to be enclosed within stockade style fencing. The
 recommendation is made to also install a reinforced concrete service apron in
 front of the dumpster location, to reduce future asphalt parking lot damage from
 the service vehicles.
- The current wooden front entry property identification sign is in poor condition and warrant replacement with masonry signage.
- Landscaping improvements are proposed, which will include: additional plantings/landscaping around the club house; addition of bushes to screen the pad-mounted heat-pump units; and planting of approximately 45 additional trees around the property.

- In addition to current recreational amenities. The planned rehabilitation will include the addition of weight equipment, furniture, sales office, and stacked laundry units to the existing clubhouse.
- Management is proposing additions to existing exterior lighting fixtures (approximately 18 fixtures) to improve site security. The recommendation is made to include repairs (i.e. missing covers) to breezeway assemblies, and replace existing building mounted wall-pack lights.
- Exterior vinyl siding, while observed in good physical condition, will require powerwashing and repair of localized damage.
- The ninety-six (96) units at the property will undergo extensive renovations, to include new vinyl flooring in kitchens and bathrooms; repaint all walls, ceiling and trim; replace kitchen cabinets and bathroom vanity; install new kitchen and bathroom counter/vanity tops; install new dishwasher; replace range, 18-cubic foot refrigerator, and range hood; install new washer/dryer stacked unit; replace all interior light fixtures; repair all drywall and trim prior to painting; install new sink and tub plumbing fixtures; install new carper in the living room, hall and bedrooms; and install new window treatments (mini-blinds).
- Proposed renovations include the repair and/or replacement of HVAC components (both interior and exterior). In addition, consideration should be given to replacement of the original exterior HVAC condensing unit electrical disconnects and re-insulating copper piping at this time.
- All water heaters older than eight (8) years old and those with problems will be replaced during interior renovations. The recommendation is made to install drain pans under hot water heaters during replacement.

1.3 REPLACEMENT RESERVES

An investigation of the subject property identified the following items, which will require replacement, repair, or significant maintenance over the following 10-year term:

STORY AND A CENTRAL PROPERTY.	Figure Lores (#100)	
Uninflated Cost	\$ 189,231	\$ 197
Inflated Cost (2.5%/year)	\$ 221,154	\$ 230

The Hill Top Terrace Apartments - Condominiums in Blacksburg, Virginia were constructed in 1981 - 1982 using industry standard workmanship and materials. At the time of inspection, the apartment buildings were observed in generally fair physical

condition. D3G Inspected representative building components and systems to provide clarity to the overall inspection. The following is a summary of near and long-term needs of the property, as noted during the inspection by D3G. Please refer to the appropriate sections of this report for detailed information.

- Asphalt repair and 1.5" overlay is a planned rehabilitation item. However, seal coating and re-striping of the asphalt driveway and parking surfaces will be warranted each 5 years.
- Extensive concrete sidewalk repair is a planned renovation item. The periodic repair of flatwork (sidewalk) surfaces will be necessary during the following 30year term. These activities will be required every 10-years.
- Exterior metal and wooden finishes will require painting during the following 30year term. These activities will be required every 8-years.
- The exterior vinyl siding of the buildings are in generally good physical condition, with required local repairs planned during proposed renovation. However, within the following 30-year term future replacement is anticipated to maintain the watertight integrity of the building envelope.
- The asphalt composition shingles are in generally good to fair condition; however, within the following 30-year term future replacement is anticipated.
- Exterior metal entrance doors are undergoing replacement on an as-needed basis and the double-hung vinyl clad windows were installed in 2000; however, based upon and approximate 35-year estimated useful life (EUL), replacement of exterior doors and windows at each building can be expected within the 30-year term.
- The eight (8) three-story buildings feature exterior common stairwells and breezeways, which are proposed for renovation. Future flatwork repairs will be required periodically throughout the following 30-year term.
- Proposed planned renovations include the installation of wooden fencing around the dumpsters. Repair and/or replacement of the wood fencing are anticipated during the study period.
- Addition of exterior lighting is on the list of proposed renovations; however replacement of lights is to be expected and anticipated during the study period.
- The replacement of the existing wood entrance sign will be incorporated during proposed renovations; however, the new masonry sign will require future refurbishment during the study period.

PROPERTY CONDITION ASSESSMENT (PCA)
HILL TOP TERRACE
BLACKSBURG, VA
D3G PROJECT # 2005-653

- The sewer lines at the property are reported to be in good working condition, and back-ups were not observed; however, based upon an approximate 45-year EUL, replacement of the sewer main drops at each building can be expected within the following 30-year term.
- Renovation of the clubhouse will be accomplished during the proposed rehabilitation; however, refurbishment of the clubhouse is anticipated. Additionally, replacement of the clubhouse kitchen refrigerator, HVAC systems and 100-glalon water heater is to be anticipated during the study period.
- The swimming pools (to include surrounding chain link fence) at the property will
 under-go repairs during the proposed renovations; however, refurbishment is
 anticipated during the 30-year term. Additionally, the playground equipment will
 require near term replacement based upon age of the assemblies.

It should be noted that our reserve schedules do not include costs associated with routine maintenance. Repair or replacement items that total less than \$500 are considered routine maintenance items and are not included in the itemized list of recommended repairs unless they are associated with a regulatory compliance or safety issue. Interior replacement items are not included within our evaluation, based upon the future condominium requirements at the property

2.0 LIMITATIONS

This Assessment has been prepared for, and can be relied upon by the Client, Venture Investment Properties Group. The Client and/or its assigns and certain limited investors involved in the condominium conversion process, may use and rely upon this Assessment. This Assessment has been prepared for the exclusive use of the referenced client for specific application to the subject site. The Assessment was prepared in accordance with generally accepted industry standards of practice for building inspection services, including ASTM E-2018 Standard Guide for Property Condition Assessments: Baseline Property Condition Assessment Is not to be reproduced, either in whole or in part, without written consent from D3G. D3G authorizes reproduction of this Report as part of the Public Offering Statement.

The statements in this Assessment are professional opinions about the present condition of the subject property. They are based upon visual evidence available during an inspection of all reasonably accessible areas of the property. We did not remove any surface materials, perform any destructive testing, or move any furnishings. The study is not an exhaustive technical evaluation. Such an evaluation would entail a significantly larger scope of work than was determined for this project.

Accordingly, we cannot comment on the condition of systems that we could not see, such as buried structures and utilities, nor are we responsible for conditions that could not be seen or were not within the scope of our services at the time of inspection.

We did not undertake activities that would completely assess the stability of the building or the underlying foundation soil. Likewise, this is not a seismic assessment nor do we make comments or conclusions regarding wood boring pest/insect damage. Our on-site observations pertain only to specific locations at specific times on specific dates. The effective date of this report is September 09, 2005, and is based upon an inspection date of August 23, 2005. Our observations and conclusions do not reflect variations in conditions that may exist in unexplored areas of the site or at times other than those represented by our observations. Building construction drawings/documents were not available for review.

3.0 INTRODUCTION

3.1 BACKGROUND

Dominion Due Diligence Group (D3G) was retained by Venture investment Properties Group ("Client") to conduct a Property Condition Assessment (PCA) at the referenced property in order to provide an objective, independent, professional opinion of the potential repair and deferred maintenance costs associated with the subject property.

Mr. Dale L. Baxter and Mr. Steve Kaskey performed a detailed inspection of the Hill Top Terrace Apartments - Condominiums on August 23, 2005. Weather conditions at the time of the survey were partly cloudy with a temperature of approximately 85 degrees Fahrenheit. Photographs of the subject property were taken during the site inspection and relevant photographs have been included in the report.

3.2 SCOPE OF WORK

The purpose of this PCA is to determine the current condition of the property and to establish a preliminary capital reserve for the immediate and long-term (30-year) future. This PCA is intended to be used in support of a pending real estate transaction where the client has requested a detailed understanding of the current site condition and future capital requirements, for the purpose of condominium conversion.

In accordance with Virginia condominium regulations (18VAC135-30-510 and 18VAC135-30-520), this Property Condition Assessment needs to cover all physical assets within the condominium, whereas "physical assets" is defined as either a structural component or a major utility installation. A "structural component" is

PROPERTY CONDITION ASSESSMENT (PCA)
HILL TOP TERRACE
BLACKSBURG, VA
D3G PROJECT # 2005-653

defined as a component constituting any portion of the structure of a unit and/or common element and in which a defect would reduce the stability or safety of all or a part of the structure below accepted standards or restrict the normal intended use of all or a part of the structure; and a "major utility installation" is defined as a utility installation or portion thereof which is a common element or serves more than one unit. In accordance with these regulations, this report includes only a review of structural elements, multi-family building envelopes, common areas, site amenities and utility service connections.

Review of these site elements has been performed in accordance with ASTM E-2018 Standard Guide for Property Condition Assessments: Baseline Property Condition Assessment Process. The assessment is based upon interviews with management and local agencies, a review of available documents, and a visual examination of the property. Interior unit access included approximately 15% (14 units) due to prior tenant notification problems.

3.3 TERMS AND DEFINITIONS

The following definitions and reference standards are routinely utilized within the text of this Assessment:

Excellent: Component or system is in "as new" condition requiring no rehabilitation and should perform in accordance with expected performance.

Good: Component or system is sound and performing its function, although it may show signs of normal wear and tear. Some minor rehabilitation may be required.

Adequate: A component or system is of a capacity that is defined as enough for what is required, sufficient, sultable, and/or confirms to standard construction practices.

Fair: Component or system falls into one or more of the following categories: (a) Evidence of previous repairs not in compliance with commonly accepted practice, (b) Workmanship not in compliance with commonly accepted standards, (c) Component or system is obsolete, (d) Component or system approaching end of expected performance. Repair or replacement is required to prevent further deterioration or to prolong expected life.

Poor: Component or system has either failed or cannot be relied upon to continue performing its original function as a result of having exceeded its expected performance, excessive deferred maintenance, or state of disrepair. Present condition could contribute to or cause the deterioration of other adjoining elements or systems. Repair or replacement is required.

Zoning Information:

RM-48, Medium Density Multi-unit Residential

Allows 48 bedrooms/acre, or 329 bedrooms for the

property. The site currently contains 240 bedrooms.

3.4.2 PROPERTY ORIENTATION

The property is located at 1776 Liberty Lane, SE in Blacksburg, Virginia. The eight (8) three-story buildings and one (1) centrally located community building (with lease and maintenance offices, laundry and club house). The property is situated with a predominately medium-density residential area, with adjacent properties consisting of multifamily apartment buildings, multifamily townhouse structures, and detached single-family homes.

4.0 BUILDING OVERVIEW

The description of the property and its components is based upon visual observations the inspecting engineer's knowledge of typical construction practices, as well as, information obtained during personnel interviews.

4.1 STRUCTURAL ELEMENTS

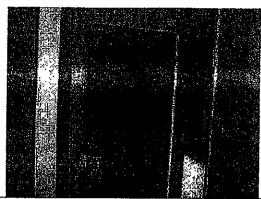

The structures feature standard reinforced footers, concrete masonry unit (CMU) foundation walls, with a monolithic reinforced slab on grade construction. The floorceiling assemblies of the buildings are constructed of conventional dimensional wooden joists with plywood sub-flooring in the second and third floor apartments and reinforced concrete slab on grade for first floor apartments. Gabled wood truss framed roofing features twenty (20) year composition asphalt-fiberglass 3-tab shingle over felt paper, with an estimated 5/12 pitch. According to management staff, the property has not experienced any past structural issues. Minor exterior settlement cracking of CMU parging was observed, which is considered normal based upon the date of construction, site topography and soil conditions. A site inspection of the property did not identify visible evidence of dynamic structural duress, and D3G can certify that the buildings are currently structurally sound.

4.2 EXTERIOR WALLS, WINDOWS, AND DOORS

Exterior walls are constructed of standard 2" X 4" wood framing with T1-11 sheathing, and vinyl siding overlay. Exterior walls were observed in good physical condition; however, numerous damaged areas, observed during the inspection, of vinyl siding will be repaired during the planned renovations.

The building features white vinyl clad, double hung, non-glazed, insulated, sliding window assemblies, in generally good physical condition. Each building also features six (6) insulated metal doors in metal casements (primary entrance). Front entrance doors feature green painted wooden decorative door surrounds. These entrances have been recently repaired and/or replaced and are in fair physical condition.

1,000		
Near Term Replacement		
Replace ori	ginal unit entrance doors	
Useful Life:	30	
Effective Age:	23	
Remaining Life:	7	
Replacement/Repair Cost:	\$ 14,640	

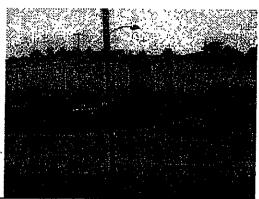

4.3 SOFFITS, FASCIA AND TRIM

Soffits of the property are vented vinyl and constructed of wooden framing wrapped with pre-finished coil-stock aluminum on the fascia and trim. Rake, trim, soffits and fascia are currently in good physical condition.

4.4 ROOFING

Roofing at the property consists of 20-year asphalt composition fiberglass standard 3-tab shingles applied over conventionally framed wooden trusses, plywood sheathing, and felt paper. The current roof assemblles are in fair physical condition, with evidence of staining on select surfaces. Roofing is reported to be 10 to 12 years old and will require replacement within the near term.

Near	Term Replacement
Replace asphalt co	emposition shingled roof surfaces
Useful Life:	20
Effective Age:	10 to 12
Remaining Life:	8 to 10
Replacement/Repair Cost:	\$ 84,216
COMMON AREAS	

4.5

4.5.1 VERTICAL TRANSPORTATION

The subject property features breezeways with metal framed stair assemblies, with poured concrete treads, metal risers and metal handrails. Stair assemblies were observed in poor physical condition; however, all concrete stairways and landings have been reviewed by an engineer and will be repaired, painting, replaced, and sealed during the planned renovation.

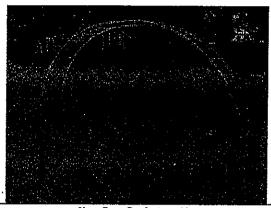

4.5.2 COMMON HALLWAYS

This property does not feature common hallways.

4.5.3 RECREATION FACILITIES

The property features a 30' X 60' below ground swimming pool, playground areas (adjacent to units C and D), community room, and an asphalt basketball court. These facilities range from fair to poor condition; however, according to the proposed renovations list, repairs to the pool and interior/exterior improvements to the club house will be performed during the rehabilitation process.

Near	Near Term Replacement			
Replace playground equipment				
Useful Life:	25	٦		
Effective Age:	18	٦		
Remaining Life:	7	٦		
Replacement/Repair Cost:	\$ 15,000	٦		

4.5.4 MAINTENANCE/LEASING OFFICE

Located on the property is an on-site management facility, which contains both maintenance and leasing offices. This building also features a community room with kitchen and laundry room. Located within the maintenance office area is a one-hundred gallon gas-fired (with electrical backup) hot water heater. The laundry room features seven (7) leased coin-operated top-load washers and eight (8) coin operated front-load dryers.

4.6 UTILITY SYSTEMS AND CONNECTIONS

The main water supply for each building originates at a vaulted curbside water meter. The mains are equipped with shut-off valves and back-flow preventers, supplying water at a reasonable working pressure. Visually (limited) accessible domestic water piping is constructed of copper piping, fittings, couplings and joints. Where visible, domestic water piping is not insulated. According to the site contacts, the potable water supply at the property is functioning properly. Accessible plumbing piping was observed in good physical condition. Accessed units were inspected for water pressure and no problems were identified or reported. Units are equipped with 40-gallon electric water heaters.

Sewer connections at the property are presumed constructed of cast iron piping exiting the buildings. The sewer lines are connected to the municipal sewer system and were reported in good working condition. No problems with the existing sewer connections were noted or reported; however, visual access to the sewer main could not be provided. Accessed units were inspected for sewer line (sink) drainage and no problems were identified or reported. Based upon the reported site conditions, the sewer connections at the property are adequate.

PROPERTY CONDITION ASSESSMENT (PCA)
HILL TOP TERRACE
BLACKSBURG, VA
D3G PROJECT # 2005-653
PAGE 15

The apartment buildings receive electrical power from exterior pad-mounted transformers. Electrical service to each dwelling unit consists of 120/240V AC, 3-wire, 1-phase with 100-amps available. Electrical panels with breakers are located within the mechanical/storage closets, typically situated in the main hallways. Representative electrical panels were accessed, and the majority of receptacle and outlet wiring was identified to be copper.

The apartment buildings receive HVAC service from exterior pad-mounted two (2) ton heat pump units of various ages. Individual air handlers, located within the mechanical/storage closet, provide for hot and cold air circulation within respective apartments. Repair and/or replacement of HVAC components will be accomplished during proposed renovations.

5.0 EXTERIOR SITE IMPROVEMENT OVERVIEW

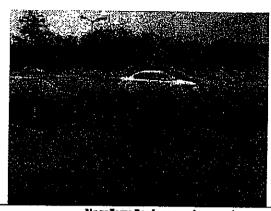

5.1 SITE LIGHTING

Exterior lighting is limited. According to the list of planned renovations, exterior lighting replacements, to include unit breezeways, will be performed during the rehabilitation program.

5.2 DRIVEWAYS, PARKING LOTS, AND SIDEWALKS

Parking for the residential tenants is provided via four (4) parking lots. The physical condition of the asphalt is poor, and replacement is warranted. None of the spaces are properly marked per the CABO-ANSI A117.1 (Council of American Building Officials) handicap standard not do they provide proper access ramps. The buildings feature common 4' and 5' wide concrete walkways. The physical condition of the concrete curbing, sidewalks, asphalt driveway and parking surfaces at the property Is poor, and extensive repairs are planned.

Replacement Cost:	\$ 55,890

5.3 SITE DRAINAGE

The site relies on surface percolation and a central drainage swale for storm water drainage. Perimeter roof gutters provide drainage to downspouts which discharge to the ground and asphalt-parking surfaces. Gutter and downspout assemblies were observed in fair physical condition. The overall property topography is sloping, conducive to positive drainage.

Exterior inspection of units identified the potential for moisture infiltration through subgrade CMU block walls, potentially compromising wall framing and gypsum of

PROPERTY CONDITION ASSESSMENT (PCA)
HILL TOP TERRACE
BLACKSBURG, VA
D3G PROJECT # 2005-653
PAGE 17

ground floor, rear partially in-grade units. The recommendation is made to ensure that exterior perimeter stormwater run-off is being properly managed. During future planned gutter/downspout replacement, the recommendation is made to ensure proper operation of drain leader drops.

5.4 LANDSCAPING

Landscaping consists of trees, shrubs, lawns and grasses surrounding the apartment buildings and situated throughout the site area. Vegetation and landscaping was observed in good physical condition. Additional plantings and trees are proposed throughout the property during the planned renovations.

5.5 SIGNAGE

Located at the entrance drive to the property, off Liberty Lane, is a sign displaying the property's name. Signage is in fair physical condition, and will be replaced with a masonry sign with plantings during the planned renovation.

5.6 FENCING

The property features approximately three-hundred four (304) linear feet of six (6) foot high chain-link fence assembly around the below ground pool area. Additionally, according to the proposed renovations list, installation of stockade fencing around the existing dumpsters will be accomplished. Post completion of renovation, chain-link fencing should not require replacement within the 30-year study period but stockade fencing will require replacement.

5.7 RETAINING WALLS

The property does not feature retaining walls.

5.8 DUMPSTER ENCLOSURES

Located on the subject property are three (3) municipal waste dumpsters; however, none are situated within enclosures, which are being constructed as a planned renovation activity.

7.0 CERTIFICATION

Dominion Due Diligence Group certifies that the data presented in this Assessment is representative of the site conditions observed during our inspection on August 23, 2005. The investigation was conducted in accordance with generally accepted industry standards of practice for building inspection services, including ASTM E-2018 Standard Guide for Property Condition Assessments: Baseline Property Condition Assessment Process, modified accordingly to accommodate compliance with Commonwealth of Virginia condominium regulations, Sections 18 VAC 135-30-510 and 18 VAC 135-30-520. No other warranty, either expressed or implied, is made. This Assessment is not to be reproduced, either in whole or in part, without written consent from D3G. D3G, its officers and its employees have no present contemplated interest in the property. Our employment and compensation for preparing this Assessment are not contingent upon our observations or conclusions.

EXPERIENCE

Mr. Hazelton has extensive construction, environmental, and training experience. Robert was raised in a construction family business environment thus allowing him to have years of experience with new construction and rehabilitation, primarily apartment and townhouse buildings. He has accumulated greater than 15 years of building construction experience. He studled environmental science at Bucknell University, and having been formerly employed with Hyglenetics, Inc. (Boston, MA) and LTS, Inc. (Richmond, VA) he has investigated, managed, monitored, and designed numerous types of environmental and engineering projects. Mr. Hazelton has been trained in building engineering and design practices pertaining to mechanical, electrical, structural, and civil concerns. As the principal of Dominion Due Diligence Group, Mr. Hazelton's duties include supervision of field projects, client contact, management of client accounts, and comprehensive report writing. He has conducted and written greater than 1,200 environmental site assessment reports, 500 building construction reports (Property Condition Assessment and Project Capital Needs Assessment), and 80 architectural review and cost estimation projects involving new construction and substantial rehabilitation. Mr. Hazelton was active in the review and commenting on the original draft MAP guidelines; and has participated as a speaker in numerous mortgage lender conferences. Specific projects have included:

CW Capital

Project Manager for six (6) HUD funded new construction projects including a HOPE VI redevelopment project in Savannah, Georgia; a high-rise new construction project in Atlanta; and a 288-unit apartment complex in South Carolina.

Prudential Huntoon Paige

Project Manager for greater than 50 ESAs and PCNAs of multi-family housing and assist-care living facility throughout the United States.

P/R Mortgage & Investment

Project Manager for greater than 50 ESAs and PCNAs for HUD lending/co-insurance projects throughout the Midwest, including apartments, assist-care living, and projects under the Market-to-Market program.

The following sites are examples of multi-family and assisted living/care projects on which Mr. Hazelton has participated:

Rosewalk Village Properties
Various Locations, Indiana

Provided PCNA and ESA services on eight (8) assisted-care living/nursing home facilities throughout Indiana, per HUD MAP guidelines.

Hilltop Skilled Nursing Properties
Various Locations, New York

Provided PCNA and ESA services for four (4) skilled nursing facilities in New York State (Albany Area) per HUD MAP protocols regarding 232/223F transactions.

<u>Salem View Apartments</u> <u>Roanoke</u>, Virainia Substantial rehabilitation project under the HUD MAP D4 process, provided PIR services, as well as, environmental investigations.

Cornerstone Portfolio; Various Locations, USA Provided environmental and engineering (PCA) services for this 24 multi-family property portfolio, Located in TX, VA, NC, FL, and SC.

Pedcor Properties: Various Locations, IN, IL, KY Acted as project manager for PCNA and ESA services for HUD and Freddie Mac loan programs of twelve (12) multi-family properties.

Weissinger-Gaulbert Building Louisville, Kentucky Provided ESA and PCNA services per HUD MAP protocols of the 1909 constructed, 12 story high-rise apartment building listed on the National Historic Register.

EXPERIENCE

Mr. Kaskey has extensive training and experience with regards to commercial and residential construction and design issues. Mr. Kaskey has fifteen years experience in the construction industry as a Construction Project Manager, Superintendent and Carpentry Foreman, having worked with Malloy Development Corporation, R.J. Reilly, and the City of Stamford Engineering Department prior to joining Dominion Due Diligence Group as a Construction Inspector. During former employment Mr. Kaskey was responsible for managing projects, conducting building inspections, owner and architect negotiations, supervising construction crews, building plan reviews and materials procurement on construction projects. As a "Residential Assessment Inspector" for the City of Stamford, Connecticut Building Department, Mr. Kaskey inspected multi-family and single-family properties for code compliance, deferred maintenance, and general property conditions. Mr. Kaskey has an in-depth understanding of all phases of construction, from planning and cost estimation, to structural requirements and site development. Mr. Kaskey is well versed in the following building and construction codes: Connecticut State Building Code (BOCA), IBC, SBCCI, UBC, VUSBC, NFPA, NEC, ADA, FHAAG and UFAS. Specific HUD clients that Mr. Kaskey has worked with include:

GMAC Commercial Mortgage

Project Manager for greater than 5 ESAs and PCNAs for HUD lending projects throughout the United States, including apartments, and assisted care living facilities.

Love Funding Corporation

Project Manager for greater than 7 ESAs and PCNAs of multi-family housing and assisted care living facilities throughout the United States.

Prudential Huntoon Palae

Project Manager for greater than 5 ESAs and PCNAs of multi-family housing and assisted care living facilities throughout the United States.
